SUMMARY

Aspiring ServiceNow Developer with experience in application development, data analysis, and process automation. Knowledgeable in ServiceNow platform concepts, ITSM processes, JavaScript, REST APIs, JSON, SQL, and database fundamentals. Skilled in requirements analysis, workflow configuration, troubleshooting, and technical documentation. Strong communicator with a collaborative mindset and a passion for building efficient solutions that enhance business operations and user experience.

PROFESSIONAL EXPERIENCE

Adjunct Professor, New York Institute Of Technology

Sep 2025 – June 2026

- Developed and facilitated courses in Computer Science and AI, emphasizing Python and algorithmic thinking, collaborating with Agile teams to achieve a 100% student pass rate through Full-Stack Development projects.
- Led web development courses teaching React, HTML/CSS, and JavaScript, enabling students to build 4-5 responsive and interactive projects.
- Enhanced curriculum by adding advanced Python and AI topics, incorporating coding-based assignments and in-class activities, leading to a 85% increase in student engagement.
- Mentored students via Zoom sessions, providing career guidance and tailored teaching methods, with around 48 students pursuing careers in computer science.

Full Stack Developer Intern, Local Grown Salads

Jun 2025 – Jun 2026

- Developed RESTful API endpoints (POST & GET) for order processing workflows using Python, Flask, and PostgreSQL, improving data exchange efficiency by 70%, and gained exposure to Java Spring Boot-based microservices architecture.
- Containerized and deployed applications using Docker, ensuring consistent environments, and worked with Spring Boot services and microservice deployment concepts.
- Integrated API services with Odoo modules and PostgreSQL and explored MongoDB for flexible data modeling and NoSQL-based storage to support scalable ERP workflows.
- Designed and executed unit and integration tests using pytest, improving test coverage to 75%, while applying testing and debugging practices relevant to Spring Boot and microservices environments.

ServiceNow Developer, Sub360 Inc.

May 2024 – May 2025

- Assisted in developing and customizing a bidding management application on the ServiceNow platform, leveraging ITSM concepts and workflow automation to streamline bid submission, approval, and tracking processes.
- Configured ServiceNow forms, business rules, UI policies, client scripts, and Service Catalog components while supporting Incident, Problem, and Change Management processes to improve operational efficiency.
- Developed and maintained REST API and JSON-based integrations between ServiceNow and external systems, ensuring accurate data exchange and supporting workflow automation across business applications.
- Collaborated with stakeholders to gather requirements, troubleshoot platform issues, perform testing and deployment activities, and create reports, dashboards, and technical documentation to support business and IT service operations.

Software Test Automation Engineer, Epam Systems

Jul 2021 - Aug 2023

- Automated 75% of test cases for HRIS employee lifecycle features using UI and API automation, enhancing release quality.
- Designed and maintained 40-50 reusable automation scripts, datasets, and test plans for web and mobile testing using Selenium, Cucumber, TestNG, TestRail, and Jira, leveraging Sauce Labs for cross-device and cross-browser testing.
- Integrated automated test suites into Jenkins CI/CD pipelines, improving pipeline reliability by 60% through requirement-to-test coverage, incorporating SDLC and Git.
- Executed REST and SOAP API testing for HR transactions, reducing production defects by 30-40% using Postman, REST Assured, JMeter, and BlazeMeter.
- Collaborated in Agile ceremonies, supporting automation efforts, and improving testing workflows, resulting in 70% improvement in testing efficiency.

EDUCATION

New York Institute Of Technology - *Master of Science, Computer Science*

Sep 2023 - May 2025

Jawaharlal Nehru Technological Institute - *Bachelor of Technology, Electronics and Communication Engineering*

PROJECTS

NutriLite

- Engineered a nutrition tracking application with React and Go, integrating USDA APIs, which enabled users to log an average of 8 meals weekly and analyze personalized nutrition trends.

Twitter Sentiment Analysis

- Built a Twitter Sentiment Analysis system using NLP, AI, and machine learning techniques to classify 1000+ tweets daily with ~90% accuracy, applying text preprocessing, feature extraction (TF-IDF), and supervised models to generate insights that can support data-driven marketing and user behavior analysis.

CompareHub

- Created a scalable product comparison platform enabling users to compare prices, ratings, and offers across online retailers using a high-performance Go backend, PostgreSQL database, and a responsive React frontend deployed on Vercel.

MTA Transit Status Platform - Cloud-Based Real-Time Monitoring System

- Built a real-time MTA transit outage tracking platform using AWS Lambda, API Gateway, and EC2 to monitor elevator and escalator status.
- Designed scalable cloud-based APIs to deliver live station outage data and improve accessibility-aware commute planning.

SKILLS

Back-End, Cloud & DevOps : Node.js, RESTful APIs, MySQL, PostgreSQL, NoSQL, Kotlin, CI/CD, Jenkins, Docker, Maven, GitLab, Git, GitHub, JIRA, Cloud Deployment (AWS), DevOps Practices, SQL, SDLC, CI/CD Pipelines, Springboot, MongoDB., ServiceNow

Programming & Front-End : JavaScript (ES6+), React.js, TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Python, Vite, Accessibility (ARIA/WCAG), React, HTML/CSS.

Testing, Automation & QA : Selenium, TestNG, Cucumber (BDD), JUnit, TDD, Postman, REST Assured, Jest, Testing
