

SUMMARY

With 2+ years of experience in software and full-stack development, I have built scalable, high-performing applications and data-driven solutions. Hands-on experience across frontend technologies like React.js, HTML, and CSS, along with work in NLP, machine learning, and data analysis through projects such as Twitter Sentiment Analysis, enables me to develop reliable, efficient, and insight-driven solutions across modern technology stacks.

PROFESSIONAL EXPERIENCE

Adjunct Professor, New York Institute Of TechnologySep 2025 - Present

- Developed and facilitated courses in Computer Science and AI, emphasizing Python and algorithmic thinking, collaborating with Agile teams to achieve a 100% student pass rate through Full-Stack Development projects.
- Led web development courses teaching React, HTML/CSS, and JavaScript, enabling students to build 4-5 responsive and interactive projects.
- Enhanced curriculum by adding advanced Python and AI topics, incorporating coding-based assignments and in-class activities, leading to a 85% increase in student engagement.
- Mentored students via Zoom sessions, providing career guidance and tailored teaching methods, with around 48 students pursuing careers in computer science.

Full Stack Developer Intern, Local Grown SaladsJun 2025 - Present

- Developed end-to-end web applications, enhancing both front-end UX/UI and back-end architecture, increasing user engagement by 85%, leveraging Cloud-based Solutions and CI/CD Pipelines.
- Mapped Python objects to PostgreSQL tables via ORM, eliminating raw SQL queries and reducing lines of code by 80%.
- Implemented unit and integration tests with pytest, boosting test coverage to 75% and improving code reliability through enhanced Observability and Testing.
- Debugged and resolved software defects, improving application stability and reducing bug reports by 65%.
- Optimized database queries, enhancing application responsiveness and improving query speed by 60%.

Mobile Application Developer Intern, Parker DeweySep 2025 - Jan 2026

- Integrated real-time skill selection using Android UI components and Material Design principles, leading to 25% positive user feedback; averaged 5-7 code commits per week.
- Collaborated with a cross-functional team to develop resume upload workflow and card-based assessment flow, resolving 30% usability issues through teamwork.
- Streamlined skills assessment process with a resume-driven, card-based experience, reducing manual effort by 4-5 hours per week through personalized question generation.

Software Test Automation Engineer, Epam SystemsJul 2021 - Aug 2023

- Automated 75% of test cases for HRIS employee lifecycle features using UI and API automation, enhancing release quality.
- Designed and maintained 40–50 reusable automation scripts, datasets, and test plans for web and mobile testing using Selenium, Cucumber, TestNG, TestRail, and Jira, leveraging Sauce Labs for cross-device and cross-browser testing.
- Integrated automated test suites into Jenkins CI/CD pipelines, improving pipeline reliability by 60% through requirement-to-test coverage, incorporating SDLC and Git.
- Executed REST and SOAP API testing for HR transactions, reducing production defects by 30-40% using Postman, REST Assured, JMeter, and BlazeMeter.
- Collaborated in Agile ceremonies, supporting automation efforts, and improving testing workflows, resulting in 70% improvement in testing efficiency.

EDUCATION

New York Institute Of Technology - Master of Science, Computer ScienceSep 2023 - May 2025

Jawaharlal Nehru Technological Institute - Bachelor of Technology, Electronics and Communication Engineering

PROJECTS

NutriLite

- Engineered a nutrition tracking application with React and Go, integrating USDA APIs, which enabled users to log an average of 8 meals weekly and analyze personalized nutrition trends.

Twitter Sentiment Analysis

- Built a Twitter Sentiment Analysis system using NLP, AI, and machine learning techniques to classify 1000+ tweets daily with ~90% accuracy, applying text preprocessing, feature extraction (TF-IDF), and supervised models to generate insights that can support data-driven marketing and user behavior analysis.

CompareHub

- Created a scalable product comparison platform enabling users to compare prices, ratings, and offers across online retailers using a high-performance Go backend, PostgreSQL database, and a responsive React frontend deployed on Vercel.

MTA Transit Status Platform - Cloud-Based Real-Time Monitoring System

- Built a real-time MTA transit outage tracking platform using AWS Lambda, API Gateway, and EC2 to monitor elevator and escalator status.
- Designed scalable cloud-based APIs to deliver live station outage data and improve accessibility-aware commute planning.

SKILLS

Back-End, Cloud & DevOps : Node.js, RESTful APIs, MySQL, PostgreSQL, NoSQL, Go (Golang), Kotlin, CI/CD, Jenkins, Docker, Maven, GitLab, Git, GitHub, JIRA, Cloud Deployment (AWS), DevOps Practices, SQL, AWS Tools, SDLC, CI/CD Pipelines.

Programming & Front-End : JavaScript (ES6+), React.js, TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Python, Java, C++, C#, PHP, Vite, Accessibility (ARIA/WCAG), React, HTML/CSS

Testing, Automation & QA : Selenium, TestNG, Cucumber (BDD), JUnit, TDD, Postman, REST Assured, Jest, Testing
